

Muhammad Umer

Mobile Engineer — Flutter · React Native · Native · On-Device AI | muhammadumer7574@gmail.com · github.com/Umer9538 · linkedin.com/in/muhammadumer2521 · Lahore, Pakistan (remote, worldwide)

Mobile engineer with 3+ years shipping production apps end to end — 14 client apps across healthcare, fintech, construction, travel, legal and education, two of them acquired by investors. In 2026, author of seven open-source projects forming a testing & safety layer for on-device AI (~500 tests, Swift + TypeScript sharing one capture format). I work evidence-first: every claim in this CV is verifiable in a public repository.

EXPERIENCE

Senior Mobile App Developer · Infinitiv.AI, Lahore 2025 — present

Production mobile apps with Flutter, React Native and native modules — BLE, WebSocket, speech-to-text — deployed on AWS with Docker.

App Developer · DriftMeta, remote 2025 — 2026

Built two investor-acquired products end to end: an AI learning platform (LangChain/OpenAI, live WebRTC classrooms, AI code evaluation) and a maternity-care AI chatbot.

Senior Full Stack Engineer · Vireon Solutions, Islamabad 2024 — 2025

AI-driven apps with TensorFlow, PyTorch and LangChain — NLP, speech recognition, and RAG architectures in production.

Associate Full Stack Engineer · Vireon Solutions, Islamabad 2023 — 2024

Web and mobile apps with Flutter, React Native and React.js — AI integration and performance optimization.

OPEN SOURCE — THE TESTING & SAFETY LAYER FOR ON-DEVICE AI (2026)

unswayed (Swift + npm) — statistical parity gate for swapping AI models: Wilson/Newcombe confidence intervals, honest "undecided" verdicts; both languages share one capture format. Real finding: Apple's on-device model failing parity with itself (compliance 100%→40%, CI [-0.88, -0.03]).

underfoot (umer9538.github.io/underfoot) — public drift observatory documenting what Apple/Google OS updates silently change in on-device models — live findings incl. an availability API that reports available while every generation fails.

vouch (pub.dev) — freezes eval baselines and fails CI on silent model-swap regressions; 85 tests.

llm_replay_eval (pub.dev) — deterministic record/replay + evals for in-process on-device LLMs — the VCR that HTTP tools can't be.

redact (pub.dev) — on-device PII redaction around every LLM call; 164 tests, zero dependencies.

golden_lens (pub.dev) — golden tests that tell AI coding agents which widget and source line broke.

SELECTED CLIENT APPS — 14 SHIPPED, 2022–2026

AI Learning Platform **ACQUIRED** — adaptive courseware, AI code evaluation, live WebRTC classrooms (Flutter, LangChain, OpenAI) · **Maternity Care Bot** **ACQUIRED** — maternal-health AI assistant (Flutter, Node.js)

First Air Tag — NFC medical profiles for first responders, offline encrypted wristbands (React Native, PostgreSQL, AWS) · **BuildBuddy** — construction management with Stripe milestone payments (Flutter, Firebase) · **Mershad** — Gemini-powered travel companion for Saudi Arabia · **CloudKey** — hotel management with NFC digital keys (Docker) · **ServiceMate** — white-label booking SaaS (Next.js, TypeScript) · **SecurePay** — E2E-encrypted payments with biometric auth · plus HealthSync, GroceryMate, AI Chatbot, Insaf, CJE, Mundial Manager.

SKILLS

MOBILE	Flutter, React Native, Kotlin, Swift, Java, Dart, Expo
FRONTEND	React.js, Next.js, TypeScript, Tailwind CSS, Redux, Zustand, GSAP, Framer Motion
BACKEND	Node.js, Express, FastAPI, Django, Laravel, GraphQL, REST, Socket.io, Prisma
AI / ML	LangChain, OpenAI, Gemini, TensorFlow, PyTorch, RAG, FAISS, ChromaDB, NLP, Hugging Face
DATA / CLOUD	PostgreSQL, Firebase, MongoDB, Redis, Supabase · AWS EC2/S3, Docker, Kubernetes, CI/CD, GitHub Actions, Nginx, Linux

EDUCATION

BS Computer Science · FAST NUCES Dean's List — top 10%

Teaching assistant to 600+ students · Admin head, FCAP Club (100+ members).
